

What six months of transactions tell the category manager

A structured read of 107,836 retail transactions ahead of the quarterly supplier review — where revenue is moving, which products are carrying each category, how discounting behaves, and when demand actually peaks.

107,836 Transactions logged	25 Products tracked	5 Categories	Rs 4,263.92 Avg. revenue / transaction	2.58 Avg. units / transaction
---------------------------------------	-------------------------------	------------------------	--	---

§01 **Category performance**
Measured as the change in total monthly revenue from January to June. Two categories are moving in opposite directions at real speed — everything else is holding roughly still.

Personal Care is the steadiest category by absolute change (about $\pm 2.2\%$ start to finish). Electronics is the only category still falling in June, with no sign of levelling off.

§02 Top & bottom products, by category

Six-month revenue leaders and laggards within each category — the first place to look before the supplier conversation gets specific.

Category	Strongest	Second	Weakest	Second-weakest
Apparel	▲ Saree Rs 14.16M	▲ T-Shirt Rs 14.10M	▼ Kurta Rs 13.61M	▼ Formal Shirt Rs 13.75M
Electronics	▲ Headphones Rs 47.70M	▲ Laptop Rs 46.55M	▼ Smart TV Rs 41.88M	▼ Tablet Rs 44.74M
Grocery	▲ Rice (5kg) Rs 8.56M	▲ Dal (1kg) Rs 8.49M	▼ Sugar (1kg) Rs 8.38M	▼ Oil (1L) Rs 8.43M
Home & Kitchen	▲ Mixer Grinder Rs 16.90M	▲ Storage Box Rs 16.68M	▼ Water Bottle Rs 15.83M	▼ Pressure Cooker Rs 16.14M
Personal Care	▲ Shampoo Rs 8.17M	▲ Body Lotion Rs 8.11M	▼ Sunscreen Rs 7.59M	▼ Toothpaste Rs 7.77M

Smart TV sits at the bottom of Electronics' own line-up — worth reviewing alongside the category's overall decline rather than in isolation.

§03 Discount response

Average revenue per transaction, by discount bracket. Deeper discounts do not buy bigger baskets here.

Avg. revenue / transaction (₹)

Average units sold stays flat near 2.6 across every bracket. No 25%+ transactions exist in this dataset. Reading this as margin impact needs product cost data, which isn't supplied.

§04 Sales timing

Chain-wide average revenue per transaction, by day of week.

Avg. revenue / transaction (₹)

Saturday leads at Rs 4,420.02; Tuesday trails at Rs 4,017.71. January was the strongest month chain-wide (Rs 84.77M total) and June the weakest (Rs 69.28M) — the same window Electronics fell hardest in.

§05 Category manager briefing

Five things to walk into the supplier review with.

MONITOR

Electronics fell 35.02% from January to June — from Rs 45.69M to Rs 29.69M — and shows no sign of levelling off. This is the category to challenge first.

POSITIVE SIGNAL

Apparel grew 34.10%, from Rs 10.05M to Rs 13.48M, and the growth is sustained across the full six months rather than one strong month.

PRODUCT REVIEW

Smart TV is the lowest-revenue product inside Electronics (Rs 41.88M). Review it alongside the category-wide decline before treating it as a standalone problem.

DISCOUNT FINDING

Average revenue per transaction slides from Rs 4,685.65 at 0% to Rs 3,631.73 at 20%, while average units stay near 2.6 — deeper discounts aren't buying bigger baskets.

DATA REQUIRED

Product cost and gross-margin data should be requested before any profitability or investment call is made off these numbers.

Revenue and units sold draw a clear line between Apparel's rise and Electronics' decline — but they stop short of profitability. Cost, margin, and inventory data turn this from a description of what happened into a basis for what to do next.

- Dataset is simulated and covers January-June 2026 only — longer-term seasonality can't be assessed.
- No product cost, gross margin, inventory, stock-out, supplier, or promotion-cost fields are supplied.
- Discount analysis is descriptive, not causal.
- No 25%+ discount transactions exist in the supplied data.
